

BISOUS FOR LÉO BENEFITS THE INADCURE FOUNDATION, THE ONLY US-BASED NON-PROFIT WORKING ON TREATMENT AND CURE DEVELOPMENT FOR INFANTILE NEUROAXONAL DYSTROPHY (INAD).

INFANTILE NEUROAXONAL DYSTROPHY (INAD)

OFTEN REFERRED TO AS PARKINSON'S MIXED WITH ALZHEIMER'S FOR KIDS. **INAD** IS AN EXTREMELY RARE, INHERITED DEGENERATIVE DISORDER OF THE NERVOUS SYSTEM.

IT IS AN AUTOSOMAL RECESSIVE, MEANING KIDS INHERIT THE **MUTATED GENES** FROM BOTH OF THEIR "CARRIER" PARENTS

Children typically develop "normally" until they're between **6 months and three years old**, and then they start to lose acquired skills. They will lose mental and cognitive abilities, as seen in Alzheimer's, and physical abilities, as seen in Parkinson's, resulting in death likely before they reach their **10th birthday**.

YOU CAN TEST FOR **INAD** BUT YOU NEED TO KNOW ENOUGH TO ASK TO BE TESTED.

There have been numerous studies that address the link between **INAD (PLA2G6 mutation)** and Alzheimer's Disease, Parkinson's Disease and Lewy Bodies Disease.

An estimated 7 to 10 million people world wide are living with Parkinson's Disease.

It is estimated that nearly 44 million people have Alzheimer's or a related dementia worldwide.

FINDING A CURE FOR THE INFANT FORMS OF THE DISEASES

could lead the way to finding better treatments and ultimately a cure for the adult versions.

AWARENESS IS KEY

In September 2018, Bisous For Léo launched an Instagram account @BisousForLeo encouraging its followers to help

KISS INAD GOODBYE

not just for Léo but for all children affected by the disease.

People from all around the world have been posting their *kisses* (or *Bisous* as they say in French) and tagging Bisous For Léo.

Gal Gadot, Sebastian Stan, Zoe Saldana, Eva Longoria, Olivia Munn, Isla Fisher and so many others have all posted in solidarity with Léo. We'd love for you to post your kisses too!
